

# SPECIAL EDITION

ix compact Security **Secure AD**

On sale 11 Apr, 2022

Since its introduction with Windows Server 2000, Active Directory, or AD for short, has become the most widely used service for resource management – used by 90 per cent of all companies worldwide. But where there is a lot of potential, attacks are also most tempting and security is at great risk. Emotet is just one of the many threats, gaining administrator rights by intruders is another. The ix kompakt teaches how the directory service can be secured at various levels.

**Target group:** CISOs, Administrators, IT managers, IT security managers.

ix Developer **Modern programming languages**

On sale 08 Sept, 2022

Rust, Go, Kotlin and TypeScript are outpacing top dogs like C++ or Java in different areas. At first glance, each has its own territory: Rust is system-oriented, Go is suitable for concurrent applications in the cloud, Kotlin wants to replace Java and TypeScript JavaScript. However, the fact that the boundaries are now blurring makes the choice even more exciting.

**Target group:** Developers, software architects, software development managers and other IT professionals involved in secure software development.
