

c't ENERGY TIPS

A lot depends on how we deal with energy: the development of climate change, the degree of dependence on problematic suppliers and, last but not least, our own bank balance. Electricity from renewable sources in particular can help with all three questions.

In its special issue on this topic, the c't editorial team focuses on essential starting points for private consumers: It explains how to save energy with digital technology, how to monitor energy demand and how to generate your own electricity.

Saving energy

- Optimizing power consumption in the home
- Compare electricity tariffs and switch cleverly
- Testing smart radiator thermostats
- Saving energy with geofences

Monitor energy demand

- Energy cost meters in comparison
- Using smart electricity meters
- Read out meter readings by radio

Generate your own electricity

- Overview of wind power, photovoltaics and generators
- Balcony power plants: advice and testing
- Large PV systems on the roof
- Small wind turbines
