"We Are Developers!" is a special supplement in the subscribed circulation of
We Are Developers! 2024

We Are Developers! – The magazine for developers and those who want to become one. Reach a top target group of more than 185,000 Heise subscribers from c’t magazin and iX. In addition to the print edition, the magazine is distributed as a digital edition to a large number of young developers (free and interactive PDF version). The digital edition is advertised via heise online, WeAreDevelopers GmbH and additional promotional activities. Thus 30,000 registered users of WeAreDevelopers get access to the digital version of the magazine, in addition 90,000 WeAreDevelopers followers are informed about the issue (incl. links) and 12,000 subscribers are made aware of the magazine directly via newsletter.

We are looking forward to having you join us!

- **WAD Social Media channels:** around 130,000 subscribers
- **WAD Newsletter:** > 50,000 recipients – multiple times
- **WAD Social Media Boost**
Planned articles

Update to .NET 8.0 (interview, cover story)
In November 2023, Microsoft released .NET 8.0 as the latest version with Long-Term Support (LTS), which will receive updates for three years. The new features include Blazor United, an additional area of application for the ahead-of-time compiler Native AOT and language features in C# 12.0, including Primary Constructors and Collection Expressions. In this interview, five experts share their opinions on the new functions and give tips on how to simplify upgrading.

Programming basics: Design patterns (working title)
Design patterns in programming are comparable to a modular IKEA shelving system. They are reusable code elements in object-orientated programming that offer solutions for typical problems. There are three basic types of design patterns: creation patterns, structure patterns and behaviour patterns. Each pattern has advantages and disadvantages. The article emphasises their importance for improving code quality, testability and maintainability in larger software projects.

Opportunities for career changers - How IT newcomers and first projects come together
The shortage of skilled labour is omnipresent in companies. Companies that have difficulties finding suitable applicants could find a promising solution by integrating career changers. The article describes the experiences of an IT consulting company that has developed a successful trainee programme for career changers over a period of almost ten years. Selection criteria, the selection process and the objectives of the programme are explained.

Artificial intelligence - from co-pilot to autopilot (working title)
There are parallels between autonomous driving and software development when it comes to the use of artificial intelligence. Autonomous driving can be described in six stages, ranging from no automation to full automation. This concept can be applied to software development: increased automation has been taking place since the mid-2010s due to the rise of containerisation, cloud computing and DevOps. Recent developments in the field of generative artificial intelligence mean that a shift towards full automation from AI co-pilot to AI autopilot is foreseeable.
