Camera Review: OM System OM-3 Astro

The OM System OM-3 Astro is specifically designed for ambitious astrophotographers and is currently the only mirrorless camera to come with an astro modification straight from the factory. This in-depth hands-on review shows how the compact MFT camera performs in night photography, deep-sky shots, and astro-landscapes. Special attention is given to innovative features such as Starry Sky AF, Live Composite, and internal stacking. In addition, five fast M.Zuiko lenses are tested in real-world conditions and compared with full-frame cameras.

Camera Review: Sony Alpha 7R VI

With the new Alpha 7R VI, Sony is combining extremely high resolution with the speed of its professional flagship model for the first time. In this review, we examine what the new 66.8-megapixel stacked sensor is truly capable of, as it is designed to enable continuous shooting at up to 30 frames per second. We also focus on video capabilities such as 8K recording, improved autofocus, and professional features for content creators and photographers. Additionally, this article compares the camera directly with the Nikon Z8, Canon EOS R5 Mark II, and Sony's own Alpha 1 II.

Cameras with APS-C and MFT sensors

In this overview, we present the latest camera models featuring APS-C and MFT sensors for various applications. Cameras with sensors smaller than full-frame are often not only more compact but also tend to be more affordable. We explain the differences and which models are best suited for specific needs.
