

HOME ASSISTANT

Smart homes are supposed to make life easier. But in the past, manufacturers of smart home devices have repeatedly frustrated users with closed and incompatible ecosystems. One way out of this frustration: the open-source software Home Assistant. A community of volunteers ensures that your smart home devices work together seamlessly. With Home Assistant in your connected home, smart door locks, smoke detectors, kitchen appliances, and lighting all speak the same language, and you can set up automations that span different manufacturers – without any licensing fees.

This special issue is aimed at anyone who wants to get started with Home Assistant or deepen their knowledge. For beginners, it covers the basics; for advanced users, it offers concrete projects for connecting all kinds of hardware, software, and data sources. We also take a closer look at the relatively new smart home standard Matter, which integrates seamlessly with Home Assistant.

ISSUES

- Everything beginners need to know about Home Assistant
- Raspberry Pi vs. Green: a comparison of entry-level hardware for Home Assistant
- Save money on gas with Home Assistant: smartly monitor fuel prices
- How to make your smoke detector also sound the alarm in case of a break-in
- Control your smart home with a PC – and use it as a control center
- PV forecast for Home Assistant: charge your electric car and smart devices efficiently
- Display vehicle data in Home Assistant using an obd2 dongle
- Midea portasplit: get the most out of it with Home Assistant
- IR readers in Home Assistant: easily read digital electricity meters
