

Software-Testing

iX Developer Special „Software-Testing“

The quality of software is becoming increasingly business-critical. At the same time, the complexity of systems is growing, and artificial intelligence is causing the volume of code to multiply. This means that the need for targeted yet effective test automation is becoming greater and more complex. Added to this is the fact that AI not only produces code but is also finding its way into systems as non-deterministic components, which calls for new testing strategies. On the other hand, AI assists the tester by independently developing, configuring and executing tests.

The three aspects: Testing AI systems, testing AI code and testing with the aid of AI form the thematic focus of the new iX special issue. However, traditional testing methods such as integration testing, UX testing and API testing, as well as reports from the field, are also given due attention.

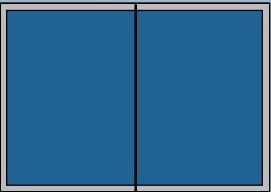

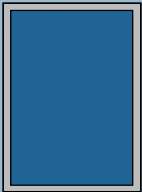

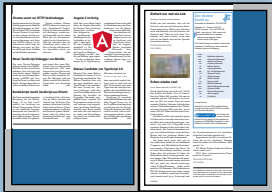

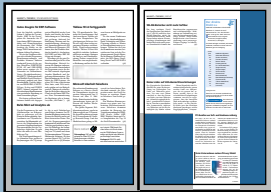

The following sections are planned:

Methods and Strategies | Tools and Infrastructure | AI and Testing | Testing in Practice

DATES

Space close:	15 Oct 2026
Materials:	20 Oct 2026
On sale:	06 Nov 2026

RATES & FORMATS ads & advertorials b/w & 4c (further formats on request!)

2/1 page	1/1 page	1/2 page	1/3 page	1/4 page
